Timm™ Master 12 SBA
The new era of mooring safety
The new era of mooring safety

The Risks Of Snap Back

Mooring operations carry a potential risk of a snap back—the sudden recoil of a broken mooring line that can cause severe injuries to crew members and port workers.

Every year, accidents happen onboard vessels related to failure in mooring lines

Mooring accidents can result in severe injuries or death

One of the primary reasons is rope failure under tension

Timm™ Master 12 SBA

At Wilhelmsen, we believe that safety doesn’t end at simply being compliant.

Our new Timm™ Master 12 SBA (Snap Back Arrestor) is a revolutionary rope that dramatically reduces the force of a snap back if it breaks, offering crew members a safer mooring environment parallel to none.

Tried, tested, and DNV GL approved, this is the new era of mooring safety.

- Delivered with certificates tailor-made to your vessel’s specifications
- Exclusive mesh braid protected eye
- Anti-twist colour indicator
The technology behind this innovative solution lies in the energy absorption properties of the SBA core of the rope.

If the loadbearing construction breaks, the SBA will absorb the snap back forces—resulting in a significant reduction of snap back.

Tested To Perfection

An impressive amount of testing and development has gone into the Timm™ Master 12 SBA to ensure its specifications live up to its game-changing nature.

Dramatically Reduced Snap Backs

With Timm™ Snap Back Arrestor

Without Timm™ Snap Back Arrestor

Type Approved, Certified and Optimised

Type Approved by DNV GL and certified for the specific strength required by each vessel—available globally in standard sizes.

Tanker vessels are required to follow the strength recommendations from OCIMF MEG4, having a rope strength between 100-105% of the Ship Design MBL.
