

ARGON E-10 FILLING

Product group: **715** Product number: **905565**

Argon is used as shielding/backing gas for electrical welding.

Product information

The gas capacity of a cylinder can be calculated in two different ways. The most simple method is the water capacity of the cylinder (in litres) multiplied by the actual pressure (in bar); the result is the capacity in litres. Although a simple method it is not the most accurate method. A better but much more complex method will give a more accurate value for the gas capacity; it will take the compressibility of the gas at both 1 bar and at the actual pressure in consideration and all based on 15 degrees C. The result is often quoted as normal litres or normal cubic metres (nm³). For argon the more accurate method will give a slightly higher value as compared to the simple method i.e. (2.2 m³ versus 2 nm³).

Features

- Argon is a colourless and odourless gas
- Argon is slightly heavier than air and is an inert gas
- It is non-toxic and non-combustible
- It is used as a shielding gas for welding, primarily to protect the molten pool against contaminants in the atmosphere

Benefits

- For your safety, the product is delivered in a Unitor cylinder complete with barcode and unique cylinder serial number
- We trace and track all cylinders using the UniTrak system to give you peace of mind

Specification

General

Cylinder Type	E-10
Invent Hazard Material (IMO/EU) classification	NA

Physical properties

Colour	Grey
--------	------

Dimensions/Weight

Connection [Size/ Type]	W24.32 MM X 1/14" Ext
Diameter [mm]	140
Gross Weight [kg]	22
Height [mm]	1000
Weight [kg]	3.6 Net

Technical data

Connection [inch]	W24.32mm x 1/14" RH Ext side
Filling pressure [bar]	200bar
Function	WELDING
Purity	5.0

Performance data

Gas Capacity [m ³]	22
--------------------------------	----
