

Product group: 661 Product number: 758904

Cooling Water Test Kit.

Controlling key parameters in engine cooling waters is important for optimum corrosion protection.

Product information

This product supersedes product no: 736462

Test Parameters: Cooltreat AL Concentration, Chloride & pH

Accessible sampling cocks should exist on all cooling systems for each diesel engine. This including, but not limited to, main jacket water, piston cooling, fuel oil valve, auxiliary engines, low temperature systems, etc.

A representative sample must be taken from each cooling water system to be tested

It is advisable to conduct the appropriate tests within 30 minutes of drawing the sample, although this time limit can be extended when the sample container is completely filled and sealed

Features

- Sturdy plastic case
- Simple to use test kit
- Test methods included

Benefits

- Helps you to protect valuable system equipment from the damaging effects of corrosion and scale formation

Specification

General

Invent Hazard Material (IMO/IU) classification	C-9
--	-----
