

BWT LIQUID PLUS 25 LTR

Product group: **655** Product number: **777701**

NALFLEET™ BWT Liquid Plus™ is a blend of phosphate, alkalinity and polymer dispersants designed for the control of scaling and corrosion in the boiler. NALFLEET™ BWT Liquid Plus™ can be used as a phosphate treatment for low hardness feed waters in boilers operating at pressures up to 40 bar.

Product information

This product supersedes product no: **571265**

Features

- Minimises scale formulation, corrosion and sludge accumulation
- Simple to Control
- Effective iron dispersant

Benefits

- Maintains sludge in a non-adherent state for removal by blow down
- Simple test to determine level of treatment
- Can be used for boilers of all pressures

Specification

General

Invent Hazard Material (IMO/EU) classification	C-9
---	-----

Physical properties

Density [g/ml]	1.45 - 1.47
Form	Liquid
Freezing Point [°C]	<-20
Materials compatibility	Polypropylene, PVC, Polyethylene, Nylon, Stainless Steel, Viton, Buna -N, Neoprene, Butyl Rubber, Nitrile Rubber, CAF, PTFE
pH	14

Technical data

Not Compatible	Aluminium, Brass, Copper, Zinc, Light Alloys, Natural Rubber
-----------------------	--

Documents

[SDoC and MD for IHM](#)

Directions for use

Dosing Method

NALFLEET™ BWT Liquid Plus is best applied neat or diluted with condensate or evaporated water to any convenient strength and applied on a continuous basis using a suitable chemical dosing pump.

Sampling and Testing

Control is by simple boiler water tests for alkalinity.

Dosing and Control

The dosage rate of NALFLEET™ BWT Liquid Plus sufficient to produce a P alkalinity in the boiler water of 100ppm is 0.4 liters/1,000 liters of water. NALFLEET™ BWT Liquid Plus is strongly alkaline. Tanks and feeding equipment should be constructed of suitably resistant material such as polypropylene, PVC, polyethylene, mild steel, cast iron or stainless steel. Avoid the use of brass or light alloys.
