

Product group: **096** Product number: **606457**

Bronze electrode for joining and cladding of bronze alloys as well as for joining these metals to steel and cast iron. Also used for welding gliding surface overlays on steel.

Product information

This product supersedes product no: 233668

Albronze-344 electrode deposit a high strength weld metal with good resistance against cavitational wear and corrosion in seawater. The deposit has low coefficient of friction.

Applications include ship's propellers, pumps and its parts, bearing shells, condensers, valves and turbine blades.

Features

- Unitor high density polyethylene packing
- Superb arc stability
- Easy slag removal and smooth weld surface
- High strength and resistance against cavitations and sea water corrosion

Benefits

- Long storage lifespan without moisture pick up
- Easy to use and excellent weldability
- Little surface treatment needed

Specification

General

Invent Hazard Material (IMO/EU) classification	NA
