Technical data

The Flipvision face shield with head band fitted with a flip-up front frame.

A clear safety glass is placed in the fixed frame under the flip-up frame protecting the eyes when chipping slag.

The flip-up front frame is fitted with a filter shade glass with shade selected according to welding current used.

The filter shade glass is protected against spatter by a clear protection glass fitted in front of it. Shade 11 glass is supplied as standard with the shield.

Proper protection is absolutely necessary to guard the welder against the danger of ultra-violet rays and bits of welding slag in the eye.

Unitor face shields for welding are made from a lightweight, robust plastic material which is unaffected by heat, cold or moisture, and both glasses and shields conform to relevant EN standards: CE approved and conforms to EN 175: 1997
