

ENTEROCOCCI (10 TEST)

Product group: **661** Product number: **700285**

Enterococci serve as indicator organisms, as their presence in potable water or ballast water may indicate fecal contamination and associated hygienic risk.

Product information

The test is designed to detect Enterococcus species in potable/ ballast water samples within 24 hours. When the substrate is metabolised by enterococci, the sample changes colour from blue to green, indicating a positive result. Any colour change from the original blue to green is considered positive. No ultraviolet (UV) light source is required for result interpretation.

Test Parameter: Bacteria – Enterococci

Used with:

POTABLE WATER TEST KIT W/O E.COLI (777619)

BALLAST CHECK 2 TEST KIT (777848)

Features

- Simple presence/absence test
- Easy to carry out on board ship
- Can be to test for Potable water and ballast water

For Ballast water, dilute the sample by 1 part sample and 9 part deionised water (10 ml sample + 90 ml demin water = 100 ml sample)

Benefits

- Portable, easy to use for testing of potable water and ballast water

Optional:

- For Ballast water, dilute the sample by 1 part sample and 9 part deionised water (10 ml sample + 90 ml demin water = 100 ml sample)

Variants

Product name	Product number
<u>E COLI/ COLIFORM (25 TESTS)</u>	777932
<u>ENTEROCOCCI (10 TEST)</u>	700285
